

My name is Cindy Curtis. My disability is Cerebral Palsy. I also have a speech disability. I have greatly benefited from STS. I think adding the video component would be a great benefit. We all know body language is important. I think the STS operator would have a easier time understanding my speech disability if she/he could see my body language and the way I talk. Potential users of STS include people with Cerebral Palsy, Parkinson's, ALS, and other speech disabilities. Thank you for your time.
